Serial No. 10/065,527

**AMENDMENTS TO THE SPECIFICATION:**

Please replace paragraph 0014 with the following amended paragraph.

When executing with a document viewing application program as described above, the plug-ins of the present invention insert visual feedback directly into the source document (for example, adding a dog-ear corner to the upper right page corner to show duplex printing, see FIG. 2), so any user interactions in the source document apply to the visual feedback as well. For example, as the user moves pages around in the document, the visual feedback moves with the page automatically. When the visual cues are added to the document, the plug-ins keep track of the objects to which they have added themselves and which were in the document originally. Preferably, the plug-ins add a hidden or unseen marker to the visual cue objects, but alternatively the plug-ins could keep a list of visual cue object IDs. When the document is to be saved or printed, the plug-ins search each page for visual cue objects and remove them, so that the saved or printed document does not include the cues. Also, when the visual cue objects are removed, the plug-ins locate any unseen markers that may have been previously inserted. For example, dog-ear corners are very useful when editing the job ticket in the application, but are not desirable in the printed output document. The job ticket parameters represented by the visual cues are stored or printed via the job ticket instead.

Please replace paragraph 0015 with the following amended paragraph.

Visual cues for document attributes (those which apply to the entire document, such as stapling or hole drilling) are applied to every page in the source document (for example, as by showing on the display a darkened line in a corner, or circles appropriately positioned in a margin of a page). Visual cues for page exceptions (such as choosing blue paper for certain pages) are applied only to the affected page (such as as [[s]] by coloring that page view). These cues are also reflected in the thumbnail view of the

document (if the application supports such a view) so that job originators can see many pages at once and easily identify which pages have exceptions associated with them. Existing products do not support a thumbnail view and require the originator to page through all document pages to see the visual cues full size.

Please replace paragraph 0024 with the following amended paragraph.
